

PRESS RELEASE

20 August 2008

Specialist Recruiter Moves to Innovative Eco-Friendly Offices

Assimilate Limited is pleased to announce its relocation to the Malvern Hills Science Park. The new office is contained within an innovative and environmentally sustainable building.

Assimilate Limited is a recruitment and training consultancy, which specialises in the Scientific, Environmental and Engineering markets. Assimilate has made the move in order to facilitate further growth, to better serve its customers.

The Assimilate team is looking forward to further developing the Company in its new premises and believes the move will prove to be beneficial for business, whilst running a more environmentally sustainable operation. Furthermore, still centrally located within the UK to serve all its clients efficiently, the Company is now at the heart of a well renowned scientific and engineering community, with excellent conference and training facilities.

The consultancy was formed in August 2004, building upon over 20 years experience within the Scientific, Environmental and Engineering industries and aims to provide a friendly yet professional service, specific to these industries. The direct focus on just three industries allows Assimilate to have an intimate understanding of its clients' businesses, products and marketplace.

The new building, Phase 3 of Malvern Hills Science Park, provides an excellent location for the business and is characterised by its sustainable energy status. The building features Termodeck®, a hollow core structure, which enables areas to be heated and cooled by air. Ground source heat pump technology is also used for the air conditioning of the building.
